

NAFEES KHAN

DevOps Engineer | Cloud Infrastructure, CI/CD & Kubernetes

Mangalore, Karnataka | +91-7899795527 | nafeeskhan7627@gmail.com | LinkedIn | GitHub

PROFESSIONAL SUMMARY

DevOps Engineer with hands-on experience in Linux, Docker, Kubernetes, Terraform, and GitOps-based CI/CD on AWS. Built three cloud projects: a private, 3-AZ EKS platform running an 11-service application with GitHub Actions, Argo CD, and full observability; a highly available 3-tier architecture provisioned with modular Terraform; and an end-to-end CI/CD pipeline for a Go application. Seeking DevOps and cloud engineering roles.

TECHNICAL SKILLS

Cloud (AWS)	EC2, VPC, ALB, Auto Scaling, RDS, EKS, S3, Route 53, ACM, IAM, Secrets Manager
Containers & Orchestration	Docker, Kubernetes, Helm, HPA, Gateway API, GHCR, Docker Hub
Infrastructure as Code	Terraform, Ansible
CI/CD & GitOps	Jenkins, GitHub Actions, Argo CD, Argo CD Image Updater, GitOps
Build Tools	Maven
Security	Trivy, AWS Secrets Manager, IAM
Monitoring & Logging	Prometheus, Grafana, Alertmanager, ECK
Version Control System	Git, GitHub
Operating System & Networking	Linux, Networking
Scripting	Shell, Python
Programming & Database	C, Java, SQL

PROFESSIONAL EXPERIENCE

DevOps Intern | Qspiders (JSpiders), Bangalore Feb 2026 – Jul 2026

- Built **Jenkins CI/CD pipelines** that automate build, test, and deployment stages, improving consistency across environments.
- Provisioned multi-AZ AWS infrastructure with **Terraform** (EC2, ALB, Auto Scaling) to support reliable, scalable deployments under fluctuating workloads.
- Troubleshoot **Linux, Docker, Kubernetes, and AWS** issues through hands-on infrastructure and deployment exercises.

PROJECTS

GitOps Platform on AWS EKS (11 Microservices) 2026

Terraform · AWS EKS · GitHub Actions · Trivy · Argo CD · Gateway API · Prometheus · Grafana · ECK | github.com/Nafees-khan-29/Microservices-Deployment

- Provisioned a private, 3-AZ **AWS EKS cluster** with **Terraform** (VPC, IAM, bastion host, S3 remote state), restricting control-plane access to a private API endpoint.
- Designed **GitHub Actions** matrix builds that rebuild only the changed services (of 11), scan images with **Trivy**, and push to GHCR, with **Argo CD** Image Updater deploying automatically (self-heal and prune enabled).
- Exposed services through Gateway API, ALB, Route 53, and ACM (TLS), with external-dns managing DNS records.
- Configured **Prometheus**, **Grafana**, Alertmanager (Slack alerts), and ECK logging, plus a CPU-based HPA scaling the frontend from 1 to 6 replicas.

Highly Available 3-Tier Application on AWS

2026

Terraform · AWS (VPC, EC2 Auto Scaling, ALB, RDS PostgreSQL, Secrets Manager, IAM) · GitHub Actions · Docker | github.com/Nafees-khan-29/3-Tier-AWS-Architecture

- Architected a multi-AZ 3-tier environment with modular **Terraform** (VPC, ALB, RDS, IAM), placing application and database tiers in private subnets behind dual ALBs, with administrative access through a bastion host.
- Implemented **EC2 Auto Scaling** with CPU target-tracking and rolling updates via ASG Instance Refresh, retrieving database credentials at runtime from Secrets Manager through IAM instance profiles.
- Automated image delivery with parallel **GitHub Actions** jobs that push commit-SHA-tagged Docker images to Docker Hub with layer caching, triggered only when application code changes.

End-to-End CI/CD Pipeline: Go Web Application on AWS EKS

2026

Docker · GitHub Actions · Helm · Argo CD · AWS EKS | github.com/Nafees-khan-29/go-web-app-devOpsify

- Containerized an open-source Go web application with a multi-stage **Dockerfile** and a **GitHub Actions** workflow that builds the image and runs tests on every push.
- Packaged the app with a **Helm** chart and Kubernetes manifests, and automated deployment to AWS EKS through **Argo CD** with Git as the source of truth.

EDUCATION

B.E. Computer Science & Engineering

2022 – 2026

Shree Devi Institute of Technology, Mangalore | CGPA: 8.4 / 10

CERTIFICATIONS & ACHIEVEMENTS

- DevOps Internship Program Certificate, Qspiders (JSpiders), Jul 2026: Linux, Git/GitHub, Maven, Jenkins, Docker, Kubernetes, Ansible, Terraform, AWS.
- Full-Stack Web Development Certification (2025): MERN stack, RESTful API design, and deployment pipelines (120+ hours).
- 1st Place, Intra-College Technical Round (2025): ranked #1 of 150+ participants in coding and problem solving.
- Led a 10-member team in building the official website for Sambhram 2025, handling event registration and promotion with a focus on page load performance.
